

To-Do List Application

■ Overview

This is a simple To-Do List application written in Python. It allows users to create, show, delete, and update tasks.

■■ Features

1. Create Task – Add a new task with default status Inprocess.
2. Show Tasks – Display all tasks and their statuses.
3. Delete Task – Remove a task by entering its name.
4. Update Task – Change the status of an existing task to Inprocess, Completed, or Canceled.

■■ Usage

Run the program and choose one of the options:

python todo.py choose process to do: --[1] create task. --[2] show task. --[3] delete task. --[4] update task. Enter the number:

■ Example

---Your tasks--- Task | Status reading | Inprocess writing | Completed

■ Future Improvements

- Save tasks to a file (so they persist after program exit)
- Add search functionality
- Allow multiple task updates/deletions at once
- Use a loop to keep the program running until exit
